

## SONTEX 565 / 566 / 868

The new **Sontex 565 / 566 / 868** heat cost allocators are replacing the Sontex 555 / 556 models. The latest generation offers maximum flexibility for parametrisation, significantly simplifies the installation and setup process and improves consumption data monitoring. The range is being expanded with the addition of the **Sontex 868**, which uses Wireless M-Bus to relay data. With their precision and their easy-to-read design, Sontex heat cost allocators guarantee the highly reliable transmission of energy consumption data, which can be relayed in several different ways.

### Innovations

- Wireless M-Bus communication (**Sontex 868**).
- Automatic activation when installed on rail.
- Remote sensor plug-in device available for all heat cost allocator models.
- Password protection for parametrisation.
- AES-128 encryption for secure data transmission.
- Increased measuring range.
- Cumulative record of frauds.
- Up to 15 scrolling values can be displayed on the LCD.
- Up to 144 monthly readings and 18 fortnightly readings saved.
- 18 monthly maximum radiator temperature readings saved.
